SITE feeiuna.io.vn

BORN 19 Jan 2002

LOCATION Hanoi, Vietnam

SKILLS

OPERATING SYSTEMS

Linux · Windows · macOS

NETWORKING

TCP/IP · OSI model

SIEM & OBSERVABILITY

Wazuh · ELK · Prometheus · Grafana · Zabbix

SECURITY TOOLS

Snort · ModSecurity · pfSense · Burp Suite · Acunetix

INFRASTRUCTURE & CLOUD

Proxmox · VMware · Docker · Kubernetes · AWS · OCI · GCP

SCRIPTING

Bash · Python

DEVSECOPS & CI/CD

Semgrep · Trivy · gitLeaks · GitLab CI · GitHub Actions · Jenkins · Argo CD

FRAMEWORKS & COMPLIANCE

MITRE ATT&CK · OWASP Top 10 · NIST · ISO 27001 · Vietnam PDP Law 91/2025

CERTIFICATIONS

CCNAv7 — Introduction to Networks
Cisco Networking Academy

Security Operations & Application Security
Coursera · (ISC)² curriculum

LANGUAGES

Vietnamese — native
English — technical reading (documentation & vendor material)

HONOURS

PROFILE

Cyber Security Engineer with a degree in Information Security (FPT University Hanoi) and over a year of experience across two directions: building security into a financial product from its early stages, and running defensive operations for multi-cloud infrastructure. Work spans Application Security / DevSecOps, monitoring and incident investigation (SOC), infrastructure and cloud, as well as bringing AI into the DevSecOps pipeline and automating incident investigation. Aiming to grow into a Security Engineer specialising in systems and application security, applying automation and AI to strengthen defensive capability.

EXPERIENCE

DevSecOps Engineer

07/2026 — present

Just Engineer

Full-stack security across product and infrastructure · DevSecOps focus

DEVSECOPS & SECURE SDLC

- Embedding security controls into the development lifecycle, shift-left: SAST, dependency scanning, secret scanning and infrastructure configuration checks running automatically in CI/CD, with gates tiered by severity
- Building secure coding standards and review checklists for sensitive flows (authentication, authorisation, transactions, personal data), together with a controlled exception process
- Designing and delivering internal secure coding training for the development team — OWASP Top 10, threat modeling (STRIDE), thinking in abuse cases

INFRASTRUCTURE, CLOUD & SECURITY OPERATIONS

- Hardening systems and internet-facing services; reviewing cloud permissions against least privilege, centralising secrets management, separating environments
- Operating security and performance monitoring (SIEM combined with infrastructure metrics); writing detection rules, reducing alert noise, standardising the investigation workflow
- Automating alert triage and enrichment (SOAR) to shorten response time; writing operational runbooks and periodic security reports for stakeholders

Security Engineer (Blue Team)

09/2025 — 06/2026

Digital asset exchange project (for a bank)

Internal Security Team

APPLICATION SECURITY & DEVSECOPS

- Integrated AI into the DevSecOps flow: built the security pipeline (pre-commit → CI/CD → AI review) and a secure coding template (as a submodule) for the team's projects
- Two-tier CI pipeline — blocking CRITICAL at merge request, warning on HIGH (Semgrep, secret & dependency scanning); an AI bot reviewing each MR diff and surfacing findings for the reviewer
- Designed and presented an internal Secure Coding workshop (~10 people including the CTO); authored Secure Coding, Trust Boundary (Zero Trust, NIST SP 800-207) and IAM guidance, mapped to ISO 27001

MONITORING & INCIDENT INVESTIGATION (SOC)

- Built an on-premise SOC lab (network configuration, Wazuh installation and tuning, centralised log collection); contributed to research on the production SOC design on AWS
- Researched and built an Incident Response AI Agent (POC) — takes an alert, queries the SIEM, enriches IOCs, opens a ticket and chat alert with a summary; every containment step requires human approval (validated across 3 scenarios: brute-force, cloud anomaly, data exfiltration)

EDUCATION

BSc Information

Security

FPT University Hanoi · 2021
– 2025
GPA 3.0 / 4.0

REFERENCES

Available on request.

SOC Tier 1 Intern

06/2025 – 07/2025

NetNam

- Studied and practised SOC Tier 1 skills through TryHackMe labs — log analysis, triage, investigation workflow

IT Operations & System Admin Intern

08/2023 – 12/2023

FSI Technology Development & Trade Investment JSC

- Supported server/VPS operations (Ubuntu), Docker & Kubernetes; handled basic infrastructure incidents and supported the DevOps pipeline

SELECTED PROJECTS

Security Handbook — bilingual technical documentation

Personal · 2025 – present · 17 chapters, Vietnamese & English · feeiuna.io.vn · github.com/fee-191/security-notes

- Systematises security knowledge from fundamentals (networking, Linux, cryptography) through to real operations (SIEM, SOC/IR, cloud, DevSecOps, GRC) — each topic covering the internal mechanics with runnable commands and configuration

LynxGuard — Mini-SOC for web applications (SIEM · IDS · WAF)

Capstone project · FPT University · 2024 · team of 4 · role: infrastructure & deployment · github.com/fee-191/lynxguard

- Built and deployed a SOC platform for a web application on VMware with a virtual network and pfSense — integrating Wazuh, Snort, ModSecurity and Zabbix; real-time intrusion detection and blocking with Telegram bot alerting (Python); security testing with Acunetix and Burp Suite

SecureBase — tooling & AI in the DevSecOps flow

Personal · 2025 – 2026 · github.com/fee-191/security-template

- A general-purpose DevSecOps framework — integrating security tooling and AI-assisted PR/MR review into the CI pipeline

CEX Incident Research — security incident analysis

Personal · 2025 – 2026 · github.com/fee-191/cex-incident-research

- Analysis of 31 exchange breaches (2014–2025, ~\$6.8B) — attack patterns, kill chain, MITRE ATT&CK mapping (Upbit, Bybit, Mixin)
